Subject : Support for Baby. Akhmad Nazarzoda (156762)

Dear Sir/Ma'am

This letter is regarding **Baby. Akhmad Nazarzoda (156762)**, a five-month-old male child from Tajikistan.

He is diagnosed with **Double outlet right ventricle, hypoplastic Right ventricle, large VSD, Arch interruption, PDA, and PAH**. He underwent a **Palliative arterial switch operation +PA Band Aortic Arch reconstruction and a Trachesostomy on an emergency basis**.

After the surgery the CT test was done and it was found that baby **Left Bronchomalacia (it is a condition that causes the cartilage in the bronchial tubes to weaken, leading to airway collapse in the lungs)** and immediately Tracheostomy was done to help the baby to breath.

The child is currently in the ICU and will remain for approximately one more month. He requires CPAP ventilation for left bronchomalacia for 4 to 5 weeks. The child is stable on NG feeds and has shown gradual weight gain. With CPAP support, the prognosis is good.

We understand the gravity of this situation and want to assure you that our team will do everything humanly possible to ensure the best outcome.

The **estimated cost of the extended stay would be Rs. 5,00,000/-**. Considering that his family has exhausted all their resources and is unable to bear the cost of this extended hospital stay, **we request that the Diya India Foundation and its Supporters extend their Support for financial assistance to save his life.**

With regards,

Dr. Ashish Katewa

Akhmad Nazarzoda 5 Months

URGENT

Trapped in a
Ventilator...

My 5 months old
son is fighting to
live....

**Without Your Help,
We Can't Save Him.**

Every day we see him crying and wailing, watch him as he becomes breathless and the feeling of helplessness overpowers us.

I am a father of Baby Akhmad Nazarzoda who is only 5 months old and is already battling between life and death. Even though we care him, hold him, but his screams only grow louder. He runs out of breath so many times and whenever we see him breathless, the thought of losing him sends shivers down our spine.

Immediately after birth, Baby Akhmad had to be admitted to the hospital for 10 days. But after that there was no improvement in his condition. As months passed he had severe congestion due to which he couldn't sleep. His condition deteriorated during the night and early in the morning, we rushed him to a nearby hospital and after conducting tests, the doctors informed us that my little Baby Akhmad Nazarzoda is suffering from congenital heart disease and requires urgent surgery to save his life.

Due to the severity of Baby Akhmad's case doctors told us that Akhmad needed an urgent heart surgery to survive, but the surgery was not available in Tajikistan so Doctors from Tajikistan suggested us to take him to India for the surgery. From that moment our journey Tajikistan to India started. With the help of translator we got to know about Amrita hospital.

Baby Akhmad underwent successful heart surgery on very urgent basis, after the surgery the CT test was done and it was found that baby had Left Bronchomalacia (it is a condition that causes the cartilage in the bronchial tubes to weaken, leading to airway collapse in the lungs) and immediately Tracheostomy was done to help the baby to breathe.

My Baby is currently in the ICU and will remain for approximately one more month. He requires CPAP ventilation for left bronchomalacia for 4 to 5 weeks.

The estimated cost of the extended stay would be Rs. 5,00,000/-.

I am working as a carpenter in Tajikistan and earning very small amount. We have been struggling for the funds as we have exhausted all the money for my little baby's treatment. Now we have nothing but we can only pray as we have no means to provide for his treatment.

We request Diya India and its supporters to help us.

We will be forever indebted to your Kindness...
